

Thomas Stephan

Full-stack developer

Full-stack developer with a low-level, systems, performance, and tooling focus. I build showcase websites, online CVs, and web products that need a backend and an admin layer.

EDUCATION

42

2024–present

Ongoing practical training focused on programming, systems, C/C++, and autonomy.

ESGI – Diploma in Computer Engineering

2021–2024

Bac+3 program focused on information systems, development, and deployment support.

DUT GEII, Neuville

2018–2021

Technical higher education in electrical engineering and industrial computing.

SKILLS

C C++ TypeScript

Next.js React Docker

OpenGL DevOps Backend

API

QUICK FACTS

Location

Beaumont-sur-Oise, France

Languages

French (native), English (conversational)

Focus

Showcase sites, online CVs, and web products with a backend and admin layer.

Digital resume

Technical builder with a clean delivery mindset.

Available for: Full-stack delivery · Showcase sites · Internal tools

I focus on products that need to look polished without becoming overly complex: readable interfaces, straightforward content workflows, and enough backend structure to keep the project maintainable. The goal is to ship something calm, useful, and production-ready.

Professional experience

Freelance / selected delivery

2024–present

Independent

- Design and development of showcase websites and online CVs with a stronger editorial feel.
- Integration of simple backends for content, publication, and administration.
- Delivery of responsive, maintainable interfaces with clear structure.
- Deployment and maintenance with a delivery-first mindset.

Selected work: Tech lead, common core project

ft_transcendence

- Led a team project spanning Next.js, Docker, C#, and Go.
- Coordinated the architecture and integration points across frontend and services.
- Balanced product delivery with technical depth and clean interfaces.

Selected projects

mandelbrot

Assembly Mandelbrot renderer with a strong low-level focus and explicit execution control.

just-shell

Paired minishell project centered on parsing, execution, and AST-based command handling.

ft_transcendence

Tech lead role on a team project spanning Next.js, Docker, C#, and Go.

Principles

Delivery over noise

I prefer clear scope, strong defaults, and interfaces that remain easy to maintain after launch.

Technical depth where it matters

I like keeping the frontend readable, while still caring about backend structure, tooling, and performance.
